## LCA Information

**Functional unit:** The functional unit is 1 sqm packaged denim fabric delivered to an average retailer platform.

**Time representativeness:** The production data in the LCA study represents the period from 1<sup>st</sup> January 2021 to 31<sup>st</sup> January 2021.

**Database and LCA software used:** SimaPro v9.1 software with Ecoinvent v3.6 database

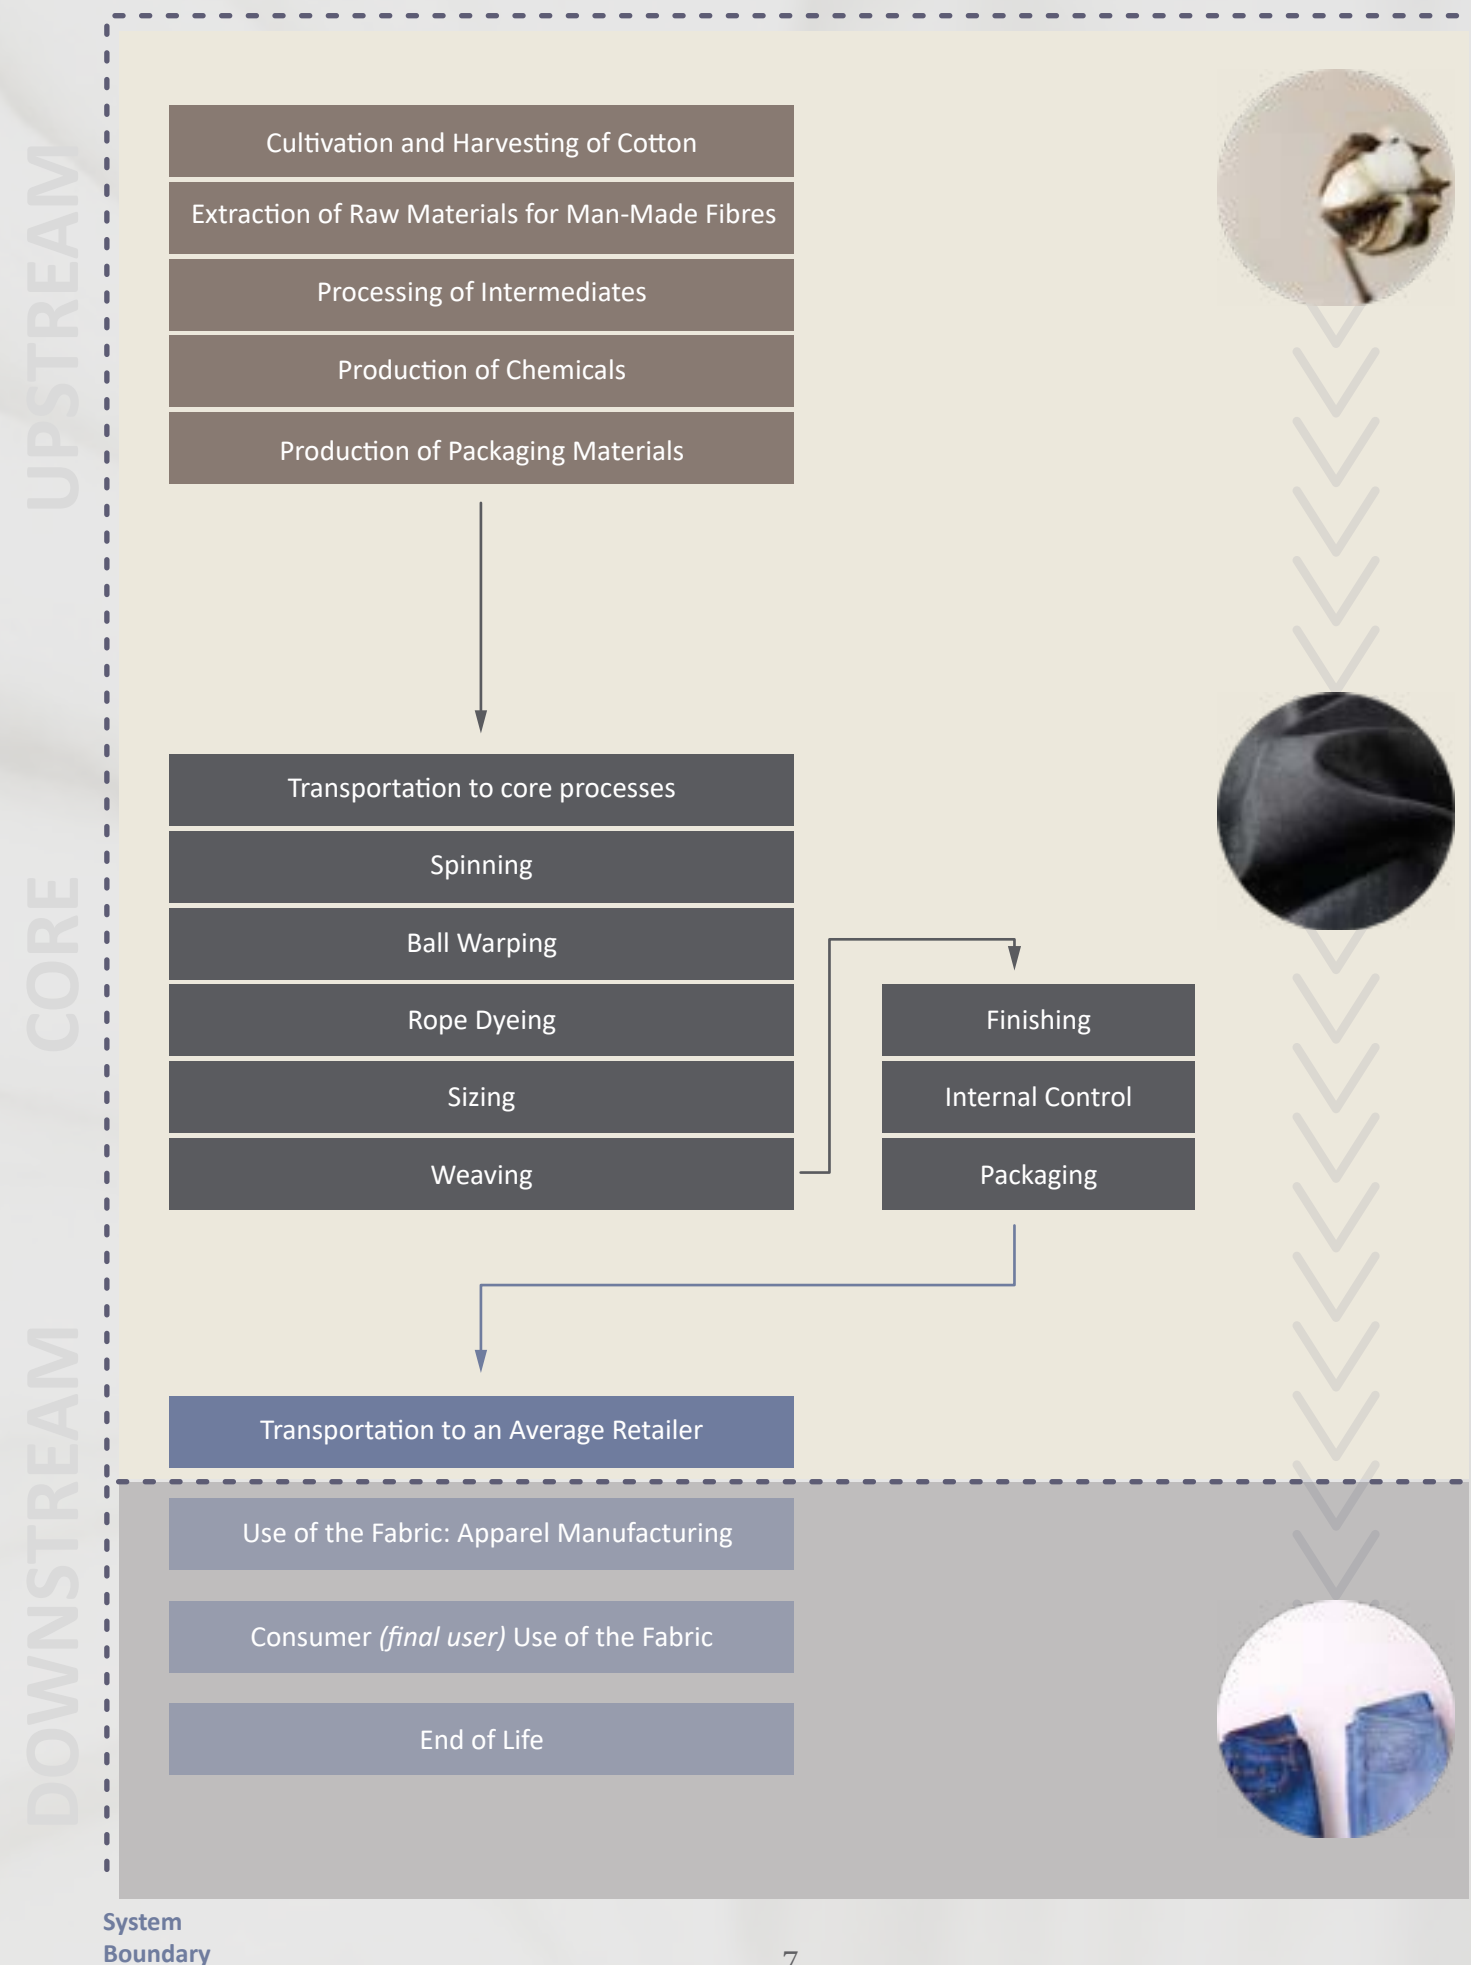

**Description of system boundaries:** Cradle-to-gate with options

**Excluded lifecycle stages:** Use of the fabric at garment manufacturing and denim laundry stages, consumer use stage of the fabric (jeans) and end of life stages have been excluded in the system boundary and not taken into account in the LCA study.

**Data quality and data collection:** Site specific data is collected for the core processes from the mill for the period between 1<sup>st</sup> January 2021 to 31<sup>st</sup> January 2021. Selected generic data is used for upstream processes and obtained from Ecoinvent v3.6. Specific and selected generic data achieve the ISO 14044 data quality requirements and time representatives.

**Allocation:** Allocation was avoided by dividing the unit process into two or more sub-processes and collecting the environmental data related to these sub-processes.

**Cut – off rules:** Life Cycle Inventory data for a minimum of 99 % of total inflows to the three life cycle stages have been included and a cut-off rule of 1% regarding energy, mass and environmental relevance was applied.
