Product Category Rules (PCR):	2019:14 Version 1.11, 2021-02-05, 54 Construction Services, EN 158 Construction Works	, Construction Products and CPC 304:2012 + A2:2019 Sustainability of
Independent third- party verification of	EPD process certification	
the declaration and data, according to ISO 14025:2006:	EPD verification <b>X</b>	
Third party verifier:	Professor Vladimír Kocí	
Approved by:	The International EPD® System	
Procedure for follow-up o	f data during EPD validity involves	third party verifier: NO

The EPD owner has the sole ownership, liability, and responsibility for the EPD. EPDs within the same product category but from different programmes may not be comparable. EPDs of construction products may not be comparable if they do not comply with EN 15804.

### About ODE

ODE embarked on its business journey in 1985 with contracting operations. In 1998, ODE decided to move forward in the insulation industry, one that would serve Turkey's need. Having become an importer in 1990 and a manufacturer in 1996, ODE now manufactures products in 2 main categories, Building and HVAC insulation. ODE is now among the largest manufacturers of the insulation industry with 5 state-of-the-art manufacturing facilities, over 4 thousand product varieties, and expert workforce.

We manufacture extruded polystyrene thermal insulating material under the brand of ODE Isipan; polymer modified bituminous waterproofing blankets under the brand of ODE Membrane, glass wool products used for heat and sound insulation and fire safety under the brand of ODE Starflex; and elastomeric rubber foam insulating material under the brand of ODE R-Flex.

As its Eskişehir Manufacturing Facility comes into play, ODE which currently exports to 5 continents aims to increase its export capacity even further, and become the leader in waterproofing in Turkey.

ODE reflects its social responsibility awareness to all its operations, and is the first company in the insulation industry of Turkey to publish a "Corporate Social Responsibility Report". Furthermore, ODE has been the first among its peers to earn the internationally recognized Environmental Product Declaration (EPD) certificate which is compatible with European standards and which applies for all markets to all heat and water insulation products manufactured by ODE in its facilities in Çorlu.

Having implemented pioneering efforts toward raising public awareness of insulation and energy awareness, and taking care to be involved in projects that will hand down permanent value to the future, ODE changed its company motto to "Insulates the Future" in 2014. In knowledge of the universal responsibility of being in the global market, ODE continues to operate as a company which encourages its social stakeholders through visionary and innovative work.

ODE Çorlu/Tekirdağ, Turkey Production Facilities

ODE Eskişehir, Turkey Production Facilities

## **About Product**

The ODE Opal series waterproofing blankets incorporate all the properties of APP-modified bitumen. They are manufactured in fiberglass and non-woven polyester felt carrier types. They offer cost friendly solutions for all waterproofing details, primarily terrace and foundation applications.

- They can be widely used in climate conditions that are found throughout our country.
- They offer high thermal insulation performance when used in conjunction with ODE Isipan thermal insulation in inverted roofs.
- Slate finish provides high performance solutions for applications where UV resistance is required.
- They offer cost friendly solutions for all waterproofing details.

## **ADVANTAGES**

- Easy application at high ambient temperature
- High UV resistance (Mineral Coated)
- Extended service life thanks to APP additives
- Suitable for vertical and horizontal application

For product accessories, certificates and detailed information, please click or scan the QR code

## **Technical Specifications**

	STANDARD	UNIT	Va	lue
	SIANDARD	UNII	Polyester Felt	Glass Veil Felt
Thickness	TS EN 1849-1	mm	3-4	2-3
Length	TS EN 1848-1	m	10	10-15
Width	TS EN 1848-1	m	1	1
Flexibility at Low Temperature	TS EN 1109	°C	≤-5	≤-5
Flow Resistance at Elevated Temperature	TS EN 1110	°C	≥110	≥110
Tensile Properties	TS EN 12311-1	N/5 cm	600/400	300/200
Reaction to Fire	TS EN 13501-1	-	E	E

## PPLICATION AREA

They are used for waterproofing of roof terraces such as conventional terrace roof, inverted terrace roof, trafficable inverted terrace roofs and ventilation shaft, rainwater drainage, parapets and non-trafficable inverted terrace roofs.

## PRODUCT CONTENT

Components	Amount, %
Calcium Carbonate	45-60
Polyolephin Compounds	15-30
Others	0-10

### **LCA** Information

Functional Unit 1 m<sup>2</sup> ODE Opal Membrane

X	D	Future reuse, recycling or energy recovery potentials	Benefits and Loads

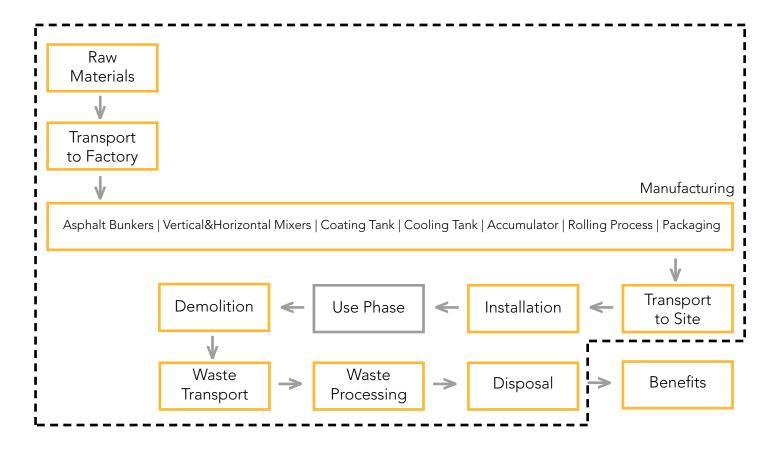

The EPD evaluates the environmental impacts of 1 m<sup>2</sup> of ODE Opal Membrane products and during the modeling, all values are taken into account for this unit.

The inventory for the LCA study is based on the 2020 production figures for Opal Membrane by ODE.

The system boundaries in tabular form for all modules are shown in the table left. This EPD's system boundary is cradle to grave. The system boundary covers A1 - A3 Product Stages, A4-A5 Construction Process Stage and C1-C4 End of Life Stage.

X = Included in LCA, ND = Not Declared

## **System Boundary**

#### A1: Raw Material Supply

ODE Membrane products production starts with raw materials, mainly locally sourced but some transported from other parts of the world. Environmental impacts during the production of all raw materials are reflected in this EPD.

#### A2: Transport to Factory

Transport is relevant for delivery of raw materials to the plant and internal transport within the manufacturing plant for each product.

#### A3: Manufacturing

Production stages start with mixing and continues with the coating, cooling, rolling and finished with the packaging process. Consumed natural gas and electricity is

taken into account during the modelling the manufacturing stage of the product.

#### A4 : Transport to Site

Manufactured products are sent to customers in different parts of the world. 200 km of road transport and 2000 km (1243 miles) of sea transport are assumed for transportation to clients or to the construction site.

#### A5: Installation

Membrane products are applied to the surface by giving heat with a torch. For installation of membrane products, 0.00055 m<sup>3</sup> LPG usage is assumed.

#### C1: Demolition

It is assumed that there is no energy use during uninstallation process. This stage is usually done by manpower.

#### **C2**: Waste Transport

Average distance from demolition site to final destination is assumed as 100 km.

#### C3: Waste Processing

There is no need for any waste process.

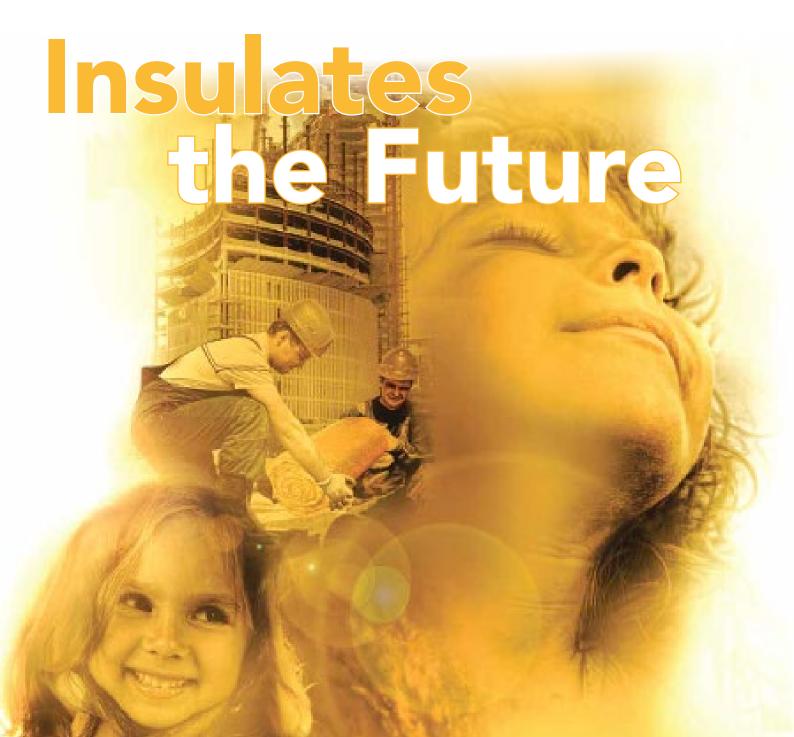

#### C4 : Disposal

For membrane products, relevant disposal

scenarios are modelled by taking into consideration the fate of the construction and packaging wastes. All construction products disposed into a landfill, which is modelled as such in this LCA. Packaging waste is assumed to end up at packaging recycling.

#### D: Benefits & Loads

There is no potential benefit as the products go completely to the landfill at the end of life. Only the benefit from packaging recycling is taken into account in this LCA model.

## **More**Information

#### Allocations

There are no co-producs in the production of ODE. Hence, there is no need for co-product allocation. Transport is allocated according to tonnages for almost all raw materials bought by ODE. For the manufacturing of product, no allocation for energy consumption or water consumption was made as the product specific data was available.

Water consumption, energy consumption and raw material transportation were weighted according to 2020 production figures.

In addition, hazardous and non-hazardous waste amounts were also allocated from the 2020 total waste generation.

#### **Cut-Off Criteria**

1% cut-off rule is applied to raw materials less than 1% in the composition but making sure their total is below this threshold.

#### **REACH Regulation**

No substances included in the Candidate List of Substances of Very High Concern for authorization under the REACH regulations are present in this product either above the threshold for registration with the European Chemicals Agency or above 0.1 % (wt/wt).

### LCA Modelling, Calculation and Data Quality

The results of the LCA with the indicators as per EPD requirement are given in the LCA result tables. All energy calculations were obtained using Cumulative Energy Demand (LHV) methodology, while fresh water use is calculated with selected inventory flows in SimaPro according to the PCR.

The SimaPro 9.1 LCA software and the Ecoinvent 3.6 LCA database were used to calculate the environmental impacts. Ecoinvent database were used as generic background data source.

The regional energy datasets were used for all energy calculations.

#### **Geographical Scope**

The geographical scope of this EPD is global.

#### Comperability

A comparision or an evaluation of EPD data is only possible where EN 15804 has been followed, and the same building context and product-specific characteristics of performance are taken into account and the same stages have been included in the system boundary. According to EN 15804, EPD of construction products may not be comperable if they do not comply with the standards.
