
# Basilico sauce

## Environmental Product Declaration

1 EPD PROCESS

The first EPD process certified in the Food industries

Barilla

Barilla
The Italian Food Company. Since 1877.

EPD®
ENVIRONMENTAL PRODUCT DECLARATION

**REGISTRATION NUMBER**
S-P-00490

**CPC CODE**
23995 Sauces
PCR 2010:19
v. 3.12 - 06.09.2019

**PUBLICATION DATE**
2015/03/23

**REVISION**
4 of 2020/06/01

**VALID UNTIL**
2025/05/31

**PROGRAMME**
The International EPD® System
www.environdec.com

**PROGRAMME OPERATOR**
EPD International AB

*This EPD has been developed in conformity to ISO 14025. An EPD should provide current information and may be updated if conditions change. The stated validity is, therefore, subject to the continued registration and publication at www.environdec.com.*

# 1. Brand and product

## THE BRAND BARILLA

The Brand Barilla, born in the 1877 from a small pasta shop in Parma, represents now one of the most known pasta's brand around the world.
Barilla is a leading company in the Italian and international pasta market, where it operates with the Barilla brand, as a symbol of Italian cuisine, and three major local brands (Misko in Greece, Filiz in Turkey and Yemina in Mexico). Barilla is also active in the segment of pasta sauces, with over 35 different recipes to meet everyone's taste worldwide.

Further information on **Barilla** website.

## THE PLANT AND THE PROCESS

Tomato sauces are produced in an owned plant located in Rubbiano (Italy), where the cooking process is very close to what people would do at home.
The process starts from sauté vegetables in oil; tomato pulp is poured when vegetables are browned and herbs are added at the last moment.
After the cooking process, Basilico sauce undergoes a heat treatment to pasteurize the product while preserving flavour and taste as much as possible over time. The pasteurization treatment, coupled with the integrity of the container, allows us to avoid using any preservatives.
The product is sold in package of 200 and 400 grams jar, both for local (Italian) and export market. The Basilico sauce sold in Italy and in the foreign countries have the same ingredients and recipe.
Sauce needs only to be heated up before the consumption.

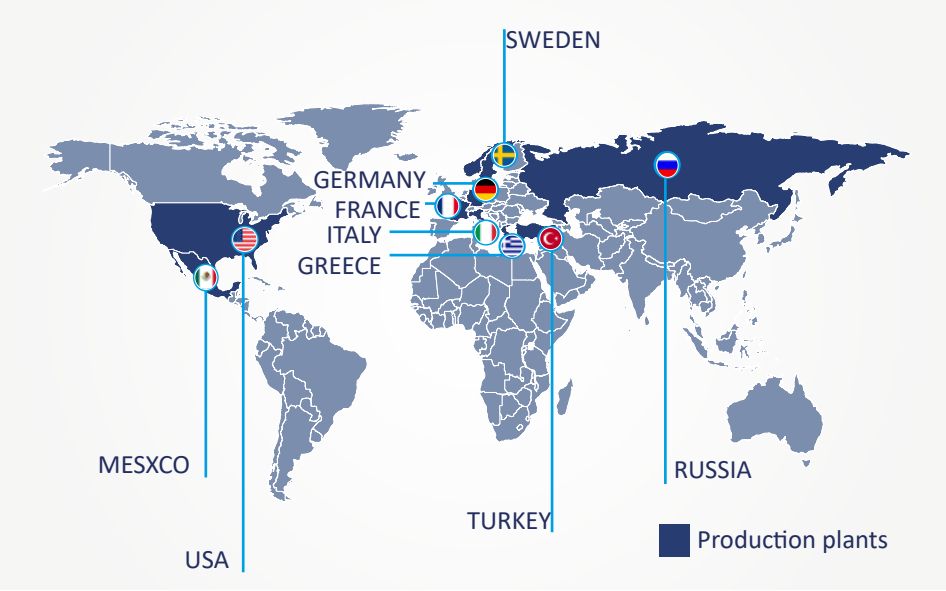
## THE PRODUCT

| NUTRITIONAL INFORMATION (per 100 g) | | |
|---|---|---|
| Energy | kcal<br>kJ | 61<br>255 |
| Fats<br>*of which saturated* | grams | 2.7<br>*0.4* |
| Carbohydrates<br>*of which sugars* | grams | 6.8<br>*6.1* |
| Fibres | grams | 1.6 |
| Proteins | grams | 1.6 |
| Salt | grams | 1.0 |

# 2. Barilla group

Founded in Parma in 1877 from a bakery and pasta-making store, Barilla is now one of Italy's biggest food groups, world leader on the pasta market and number one in ready-to-use sauces in mainland Europe, bakery products in Italy and crispbreads in the Scandinavian countries. The Barilla Group has 28 production sites (14 in Italy and 14 abroad) and exports to more than 100 countries.
Every year, its plants produce about 1 800 000 tons of food products, enjoyed by consumers all over the world, under the Barilla, Mulino Bianco, Harrys, Pavesi, Wasa, Filiz, Yemina and Vesta, Misko, Voiello, Gran Cereale, Pan di Stelle and Academia Barilla brands.

Further information on www.barillagroup.com



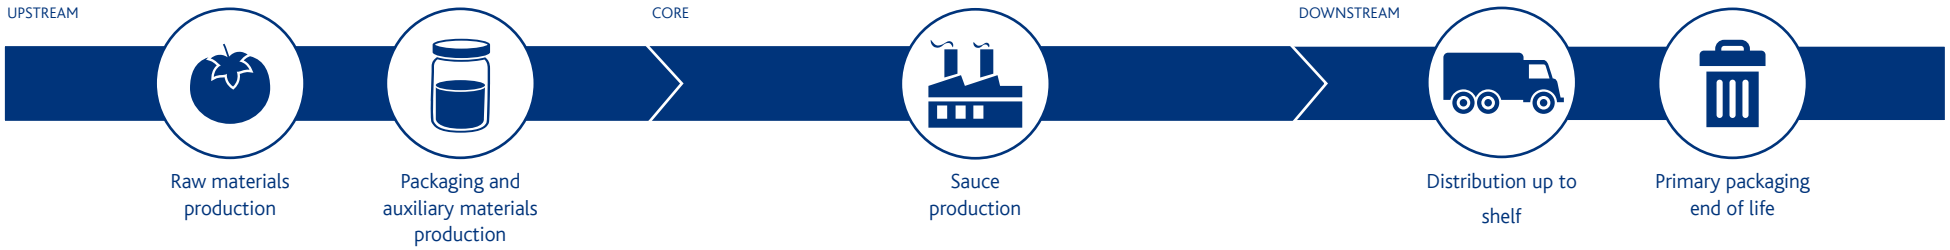
## Good for You, Good for the Planet

*When he opened his store in 1877, Pietro Barilla's overriding aim was to make good food. Today, that principle has become Barilla's corporate mission: "Good for You, Good for the Planet".*

**GOOD FOR YOU** *means: continuously improving the nutritional profile of existing products and launching new products that are tasty, safe and contribute to a balanced diet; and promoting healthy lifestyles and sustainable diet inspired by the Italian lifestyle and Mediterranean Diet.*

**GOOD FOR THE PLANET** *means: improving the efficiency of production processes in order to reduce greenhouse gas emissions and water consumption; and promoting more sustainable agricultural and farming practices for all of the Group's strategic supply chains.*

# 3. Environmental performance calculations



The environmental performance of the product was calculated using the **LCA (life cycle analysis)** methodology, including the entire production chain, beginning with growing the vegetables up until delivery of the finished product to the main distribution platforms.
The study was conducted following the specific product rules (PCR) published by the EPD system: "CPC code 23995 – Sauce". The generic data contributes to the calculation of environmental impacts is lower than 10%.

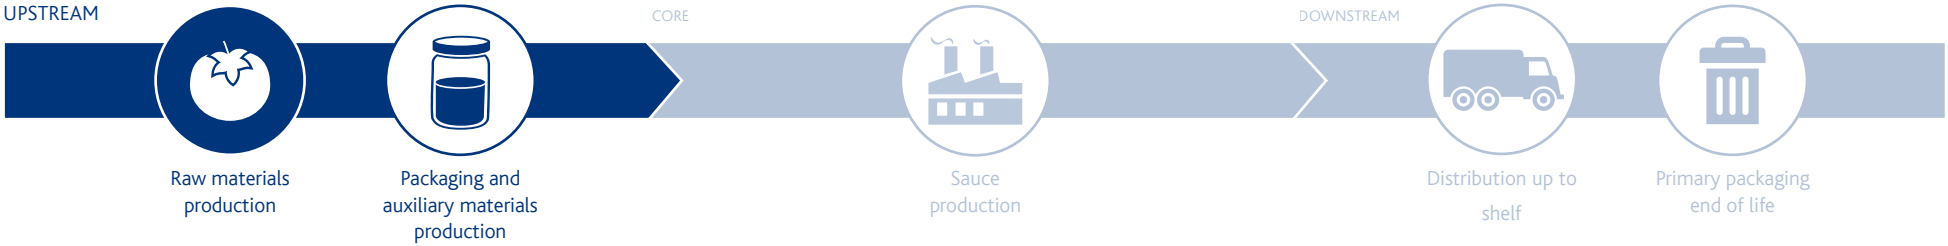
## DECLARED UNIT

Data are referred to **1 kg** of product plus the related packaging (the packaging is referred to the **200 g** and the **400 g** formats, reported to 1 kg of product).

## SYSTEM BOUNDARIES

The processes constituting the analysed system were organized in upstream, core and downstream processes, in compliance with the requisites of the EPD system.

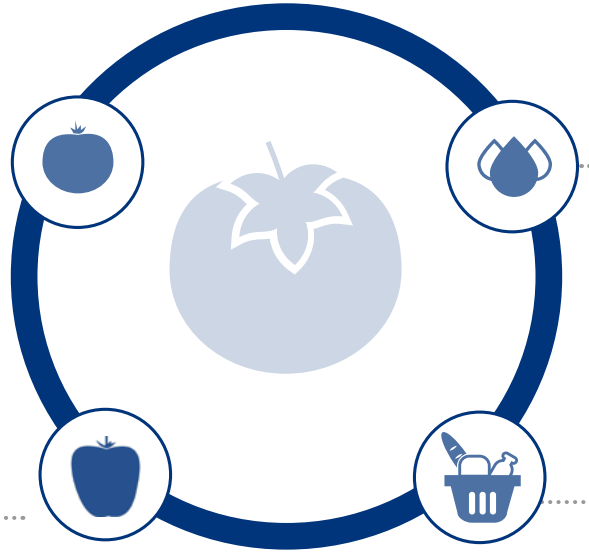
# 4. Raw material production



## INGREDIENTS PRODUCTION

### TOMATO

Impacts related to the tomatoes cultivation have been calculated on the basis of primary data (yields and fertilizer use) collected by farmers.
The semifinished products are produced by suppliers, and the processes are modelized using primary data. Reference year 2018.



### VEGETABLE OIL

Data for sunflower oil cultivation come from secondary data (collected from Agrifootprint database), the extraction and refinery data come from literature (Nilsson et al.. 2010).

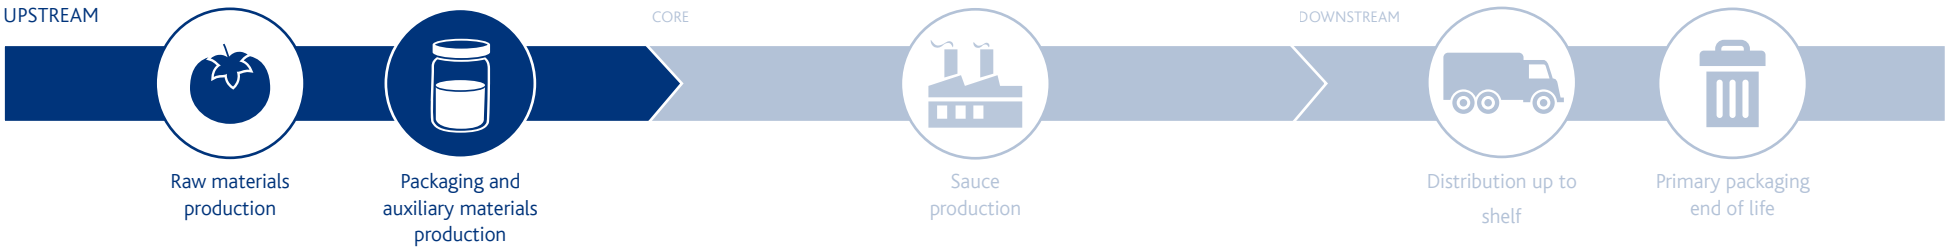
### ONION

Onions data come from LCA database (Ecoinvent).

### OTHER INGREDIENTS

Data related to the sugar come from Barilla suppliers; data related to other raw materials have been collected by LCA database (mainly Ecoinvent).

# 5. Packaging production



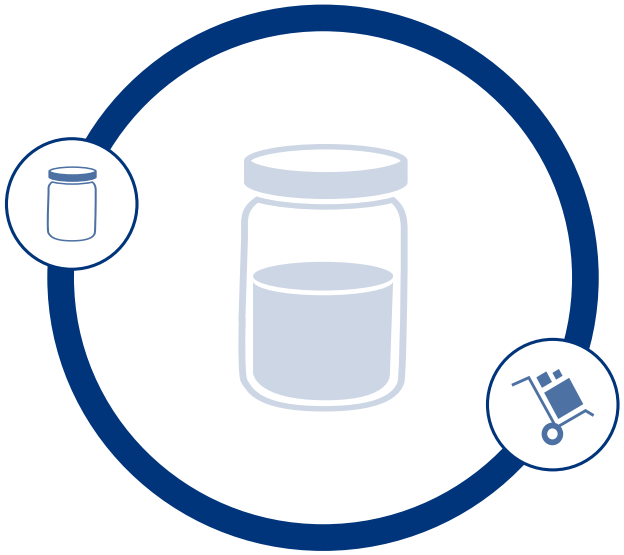
## PACKAGING PRODUCTION

*Since 2004. Barilla designs new packaging with the"LCA packaging design tool". It allows the assessment of the environmental impacts of the packaging solutions already during the design phase.*

### PRIMARY PACKAGING

Packaging environmental performances are calculated using the 200g and the 400g formats and are reported per packaging used for 1 kg of product.
The primary packaging consists in glass jar with screw top.

Primary data (from packaging unit) are used for packaging amount and packaging materials production; data about packaging production process come from Barilla LCA database.



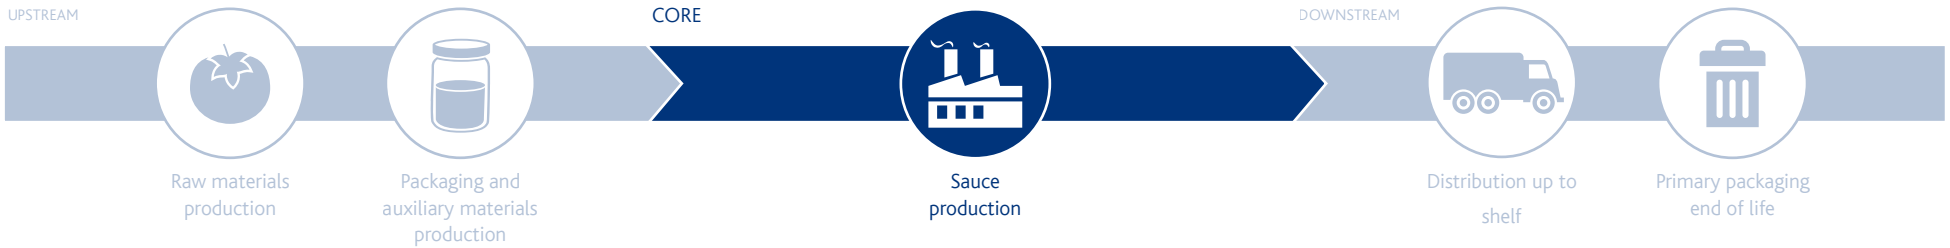
### PACKAGING FOR TRANSPORTATION

The packaging for transport consists in cardboard boxes (american box), used for the distribution of the product, and a plastic extensible film. Boxes are made mainly by recycled cardboard carton (pre and post consumer).
Data used have been collected from LCA databases (mainly Ecoinvent).

***Packaging used for Barilla products is 100% designed for recycle.***

Auxiliary materials environmental performances are evaluated by using primary data from plant, during 2019 year.
Secondary data (Ecoinvent) are used for environmental aspects associated to materials production.

# 6. Sauce production



## GENERAL INFORMATION

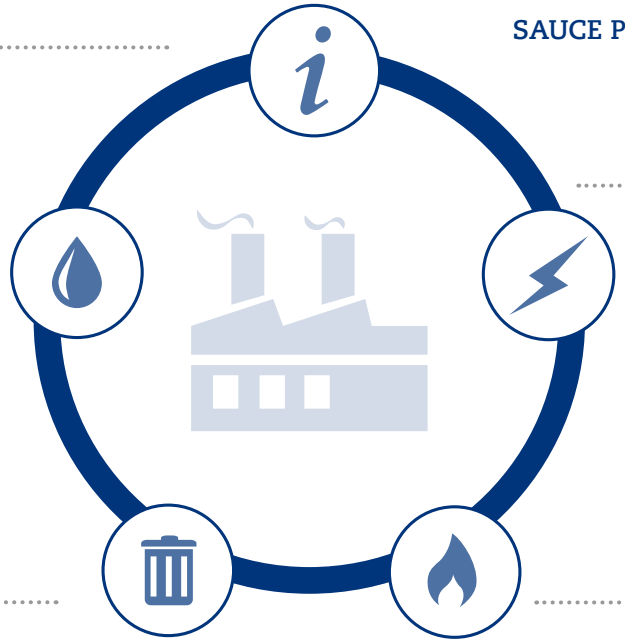
The environmental performance related to production processes is evaluated by considering the energy and the water consumption and the waste production as primary data. Secondary data (mainly Ecoinvent) are used for the environmental aspects related to the production of energy and water.

## WATER

Water consumption is evaluated using primary data. The overall value is attributed to the product using the mass allocation procedure.
Plant water consumption includes also the water amount needed for ingredients preparation: this amount is included both in plant consumption and product recipe following a precautionary approach.
Data refer to sauce production in 2019.

## WASTE

The primary data are collected by the plant registrations. The overall value is attributed to the product using the mass allocation procedure.
Data refer to sauce production in 2019.



## SAUCE PRODUCTION

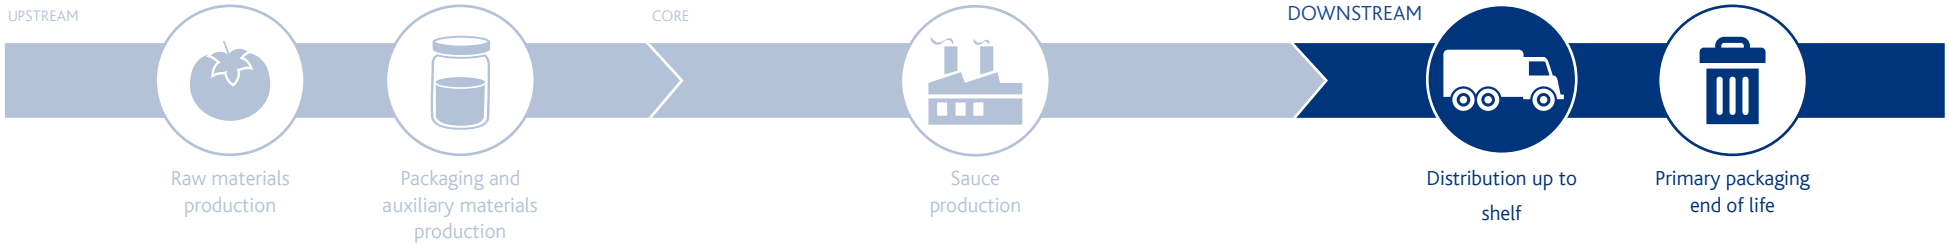
## ELECTRICITY

Total plant electricity consumption has been divided using the mass allocation procedure, as the plant produces a number of different sauces.
Barilla, through the GO certification system (Guaranty of origin market), buys energy from hydroelectric renewable resources as to cover the entire Rubbiano sauce production.
Data are referred to 2019.

## NATURAL GAS

Natural gas consumption is evaluated using primary data. The overall value is attributed to the product using the mass allocation procedure.
Data refer to sauce production in 2019.

# 7. Distribution



## DISTRIBUTION

Basilico sauce is produced in Barilla's Rubbiano plant, Italy.

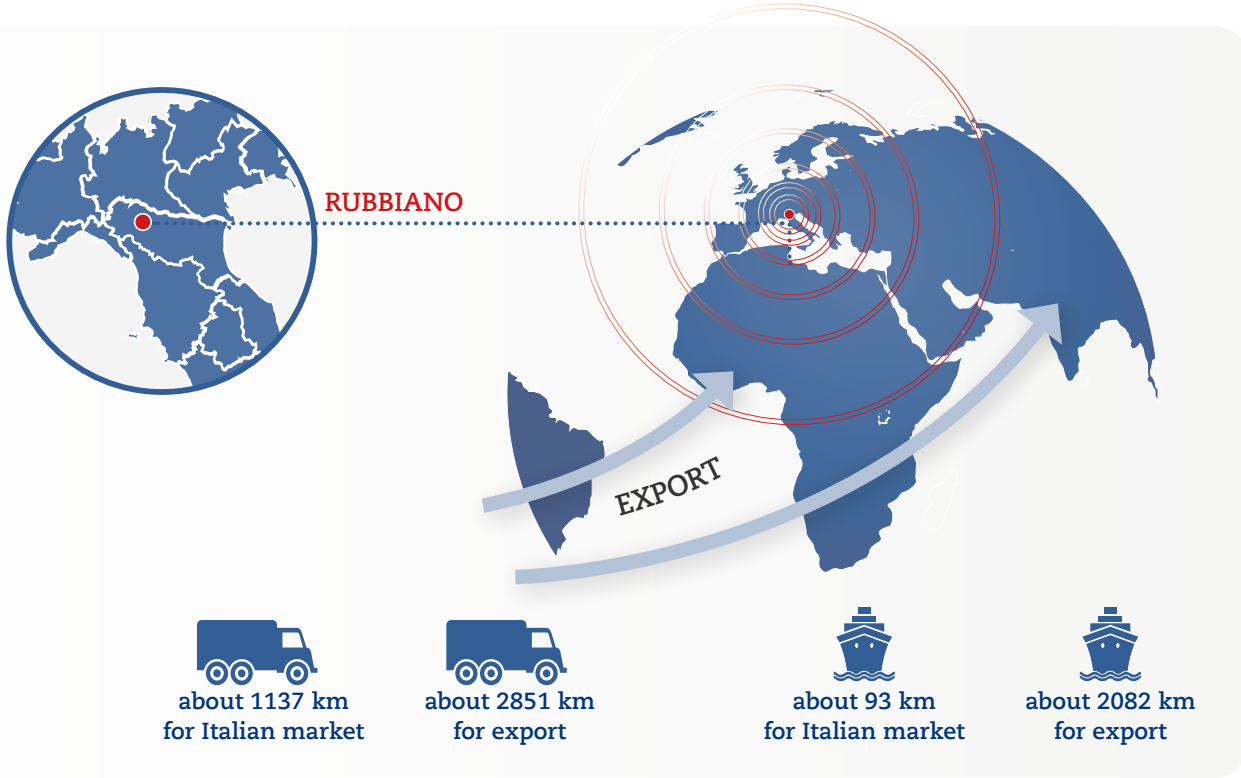
Distribution performance were calculated for the following hypotheses:

- 23% of production is intended for the Italian market
- 77% is intended for export

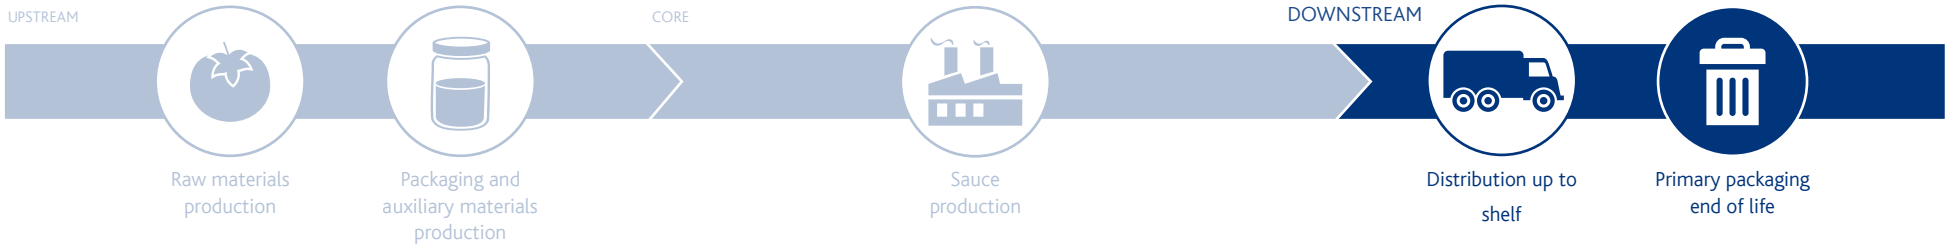
Distribution performance were calculated considering the transport for about 1137 km by truck plus 93 km by ship in Italy and 2851 km by truck plus 2082 km by ship in other countries.

The product does not require special storage conditions (refrigeration, etc).

The impacts related to the packaging for transport end of life have been calculated only for local consumption considering the Italian scenario for paper/board (81% recycling, 8% energy recovery, 11% disposal) and plastic film (13% recycling, 71% energy recovery, 16% disposal).



# 8. Primary packaging end of life



*In Italy, recyclable glass packaging for selective waste collection in urban areas is usually sent to:*

**71%** RECYCLE

Avoiding the production of virgin glass.

**29%** DISPOSAL

In Italy, 23%of waste sent to disposal are incinerated without energy recovery, the remaining part goes to landfill

GL 70 VASETTO VETRO Raccolta VETRO

**75%** RECYCLE

Avoiding the ore mining.

**25%** DISPOSAL

In Italy, 23%of waste sent to disposal are incinerated without energy recovery, the remaining part goes to landfill

FE 40 CAPSULA METALLO Raccolta METALLO

Data elaborated from CONAI 2018 Report.

# 9. Environmental results - 200g jar, local consumption

# 13. Differences versus previous versions of EPD

The differences versus previous EPD versions are due mainly to the use of updated emission factors for the energy mixes, updated packaging formats and updated recipes of the product. Moreover, new characterization factors and indicators were introduced, as a consequence of GPI update to 3.01 version.

## EPD PROCESS CERTIFICATION

Product category Rules (PCR) review conducted by:
Technical Committee of the International EPD® system.
Chair Filippo Sessa
Contact via info@environdec.com

Program operator:
**EPD International AB**
Box 210 60, SE-100 31 Stockholm, Sweden
info@environdec.com

EPD®
ENVIRONMENTAL PRODUCT DECLARATION

### EPD PROCESS CERTIFICATION

Independent verification of the declaration and data, according to ISO 14025:

- [x] EPD process verification
- [ ] EPD verification- Third party verifier

### PROCESS INTERNAL VERIFICATION

Procedure for follow-up of data during EPD validity involves third part verifier:

- [ ] Yes
- [x] No

Third party verifier: **Bureau Veritas Certification Sweden AB,** Accredited by: **SWEDAC**

BUREAU VERITAS

Process internal verifier: **Ugo Pretato,** Approved by: **The International EPD® System**

# 15. Glossary

### ECOLOGICAL FOOTPRINT

The ecological footprint measures the area of biologically productive land and water required to provide the resources used and absorb the carbon dioxide waste generated along the entire life cycle. It is measured in standard units called global hectares (gha).

www.globalfootprint.org

### CARBON FOOTPRINT

A product carbon footprint is the total amount of greenhouse gases produced along the entire life cycle. It is expressed in equivalent mass of carbon dioxide ($CO_2$-eq).
In agriculture a significant contribution is given by the emission of nitrous oxide (N2O) due to the fertilizers use. It is also known as Global Warming Potential (GWP).

www.ipcc.ch

### VIRTUAL WATER CONTENT

The virtual water content is the water both direct and indirect required to manufacture a product along its entire life cycle. Water footprint is defined as green water (evapotranspiration of water from plants). as blue water (directly used fresh surface and groundwater) and as grey water (the volume of water that is required to dilute pollutants so that the quality of the water remains above agreed quality standards).

www.waterfootprint.org

### ACIDIFICATION (AP )

It is a phenomenon for which precipitation is unusually acidic, meaning that it has substandard levels of pH. It can have harmful effects on plants, aquatic animals and infrastructure. Acid rain is caused by emissions of $SO_2$. $NO_x$ and $NH_3$. The acidification potential is measured in mass of sulphur dioxide equivalent (SO2-eq).

### EUTROPHICATION (EP )

It is an abnormal proliferation of vegetation in the aquatic ecosystems caused by the addition of nutrients into rivers. lakes or ocean. which determinates a lack of oxygen. The eutrophication potential is mainly influenced by emission into water of phosphates and nitrates. It is expressed in mass of $PO_{4^{--}}$equivalent.

### PHOTOCHEMICAL OXIDANT FORMATION POTENTIAL (POFP)

Production of compounds that, under the light effect, are able to promote an oxidation reaction leading to ozone production in the troposphere.
The indicator is mainly influenced by VOCs (Volatile organic compounds) is usually expressed in mass of ethylene equivalent (g NMVOC - equivalent).
