EPD Prepared by: Bureau Veritas HSE, Denmark

Standards: ISO 14025 and EN 15804+A2:2019. EPD's of other construction products may not be comparable if they do not comply with this standard.

Scope: This LCA study is intended to be used in a cradle to grave with module D EPD covering the following grouts in table 1, all produced by LIP Bygningsartikler A/S at the same production site. The EPD will be accessible on http://www.lip.dk/ together with safety data sheets and product information, providing information for business-to-business communication. The Geographical scope is Europe.

About LIP Bygningsartikler A/S

LIP Bygningsartikler A/S is a Danish Company, which since its founding in 1967 has produced high quality products at competitive prices.

The product range from the beginning was tile adhesive and sealants, which since then has been expanded with products within flooring putty, waterproofing, silicone, epoxy, filler compounds, etc.

All our products are continuously under internal as well as external quality control, so that we can always live up to our slogan:

LIP - when building on quality!

Product information

Products represented

LIP Multi Grout Manhattan, LIP Multi Grout Grey, LIP Multi Grout Antracite, LIP Multi Grout Jasmin, LIP Multi Grout Pearl, LIP Multi Grout Sand, LIP Multi Grout White, LIP Natural Stone Grout, LIP Rapid-Setting Tile Adhesive.

Figure 1: Pictures of the ten LIP products covered in this project report.

Product description

These products are manufactured by LIP Bygningsartikler A/S in the production plants located in Nørre Aaby, Denmark. These products are used for fixing and laying wall and floor tiles, marble, facing bricks, glass wool batts, Rockwool batts, polystyrene veneers, etc.
The manufacturing process starts from raw materials purchased from suppliers and stored in the plant. Bulk raw materials are stored in specific silos and added mostly automatically in the production mixer, according to the formula of the product. Other raw materials, supplied in bags or big bags, are stored in the warehouse and added automatically or manually in the mixer. The production is a discontinuous process, in which all the components are mechanically mixed in batches.
The semi-finished product is then packaged in bags, put on wooden pallets, covered by stretched hoods and stored in the Finished Products' warehouse. The quality of final products is controlled before the sale.

The product is supplied from production in dry form, premixed in respect of all contents but water. Water is added at the building site in the construction/ installation stage, in a defined amount and technique, in order to produce a deformable cementitious adhesive of high performance.

Declared Unit

Declared unit is 1 kg of finished product according to the PCR 2019-14 PCR Construction products v1.11.

The product consumption, of course, depends on the size of the tile, unevenness, grout size and the size of the toothpick.

Reference service life

According to LIP Bygningsartikler A/S experience, the Reference Service Life (RSL) of premade grouts has been known to be 50 years or longer.

Technical data

The products are designed, produced and CE marked according to DS/EN 13888 (grouts for ceramic tiles - Requirements, conformity assessment, classification and designations). They are classified as seen in table 2 according to DS/EN 13888 (grouts for ceramic tiles - Requirements, conformity assessment, classification and designations).

Air emission

All the seven Grouts covered in this EPD has low dust technology and very low emission of volatile organic compounds and documented with GEV-EMICODE EC 1^{PLUS}. Documentation attached for GEV-EMICODE.

Variation – sites	Manufactured in one site	-

Product stage (A1-A3):

- A1-A2: extraction, supply and transport of raw materials and packaging to LIP Bygningsartikler A/S. Raw materials are purchased from European suppliers.
- A3: manufacturing process of product and its packaging and waste management from the same process. All the electricity comes from wind energy produced at Lindø Port with >3MW onshore wind turbines. Approximately 0.88MJ is used for the production of 1 kg product. A3 covers dosage and mixing of selected and measured raw materials and additives to ensure that the product meets desired properties and packaging material consumption. Packaging product materials consist of the bag material, wooden pallet and LDPE used as wrapping material. The wooden pallet is part of a return system, and therefore not a part of this study.

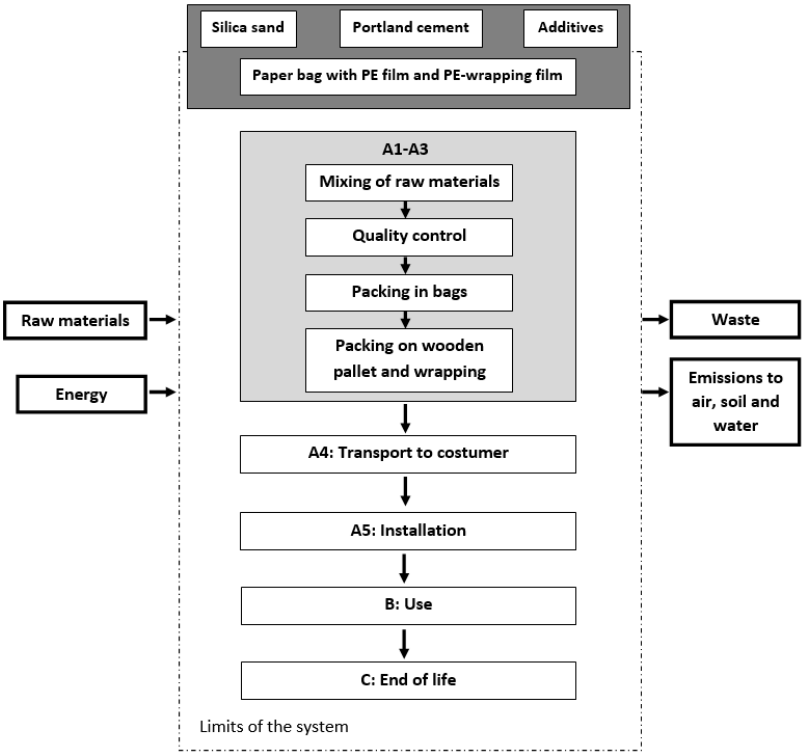

Figure 2: Limits of the system in this study.

Construction process stage (A4-A5):

- A4: distribution to typical Customer by transport of packaged product from production gate to end user (building site). The customers of LIP Bygningsartikler A/S are primarily from Denmark About 92 percent of the products produced by LIP at the production site in Nørre Aaby in Denmark, are sold in Denmark, 4 percent in Sweden, 2 percent in Norway and 1 percent in both Germany and the Netherlands. The distance has in the present LCA study been estimated to be 500km via road transport by a Euro 6 lorry of 32 metric ton.
- A5: installation of product into building, including required water and its blending energy. For installation, water consumption can be found in table 1. Mixing electricity consumption is assumed to be 0.135 MJ/kg. This is equivalent to the use of a 1200-Watt handheld mixer for 3 minutes. We assume that there are no losses during installation. There is no sector specific standard for any losses or spillage. The product can be used in 12 months or 18 months. The electricity mix is modelled with European mix and it is considered as an adequate choice, but since more than 90% of the market is in Denmark, Danish residual mix would be a better choice to consider in this study's validity period of 5 years.

Use stage (B1-B7):

- B1 to B7 are not relevant (NR) as they are not applicable: the product does not need maintenance or replacement during its RSL. If professionally used and properly installed and according to LIP Bygningsartikler A/S experience, the Reference Service Life (RSL) of premade grouts has been known to be 50 years or longer.

End of life stage (C1-C4):

- C1: deconstruction and demolition of the product into the building. Grouts for surface use are typically not considered as part of the structure of the building. However, during the building destruction, the quantity of extra energy required to break these applications can be neglected

compared to the energy required to demolish the structure of the building and are therefore not included in this LCA study.

- C2: transport of waste product from demolition to recycling/disposal facility that is waste collection. The distance is assumed to be 50 km via road transport by a Euro 6 lorry of 32 metric ton.
- C3: The product is expected to be disposed as landfill after end of life.
- C4: Waste disposal including physical pre-treatment.

D Reuse-Recovery-Recycling potential
Module D calculates the potential environmental benefits of the recycling or reuse of materials. This product has not considerable benefits due to recycling or/and reuse.

Environmental performance

All the environmental impacts have been calculated in SimaPro and with the EN 15804 + A2 Method, which takes all the methods defined by the European Standard EN 15804 + A2 into account.

All the LCIA results are relative expressions and do not predict impacts on category endpoints, the exceeding of thresholds, safety margins or risks.

LIP Multi Grout Manhattan

The estimated impact results are only relative statements, which do not indicate the endpoints of the impact categories, exceeding thresholds values, safety margins or risks.

Acronyms	GWP-GHG: The indicator includes all greenhouse gases included in GWP-total but excludes biogenic carbon dioxide uptake and emissions and biogenic carbon stored in the product. This indicator is thus equal to the GWP indicator originally defined in EN 15804:2012+A1:2013. PM = Particulate Matter emissions; IRP = Ionizing radiation, human health; ETP-fw = Eco-toxicity, freshwater; HTP-c = Human toxicity, cancer effects; HTP-nc = Human toxicity, non-cancer effects; SQP = Land use related impacts/Soil quality.

Waste production

At end of use, when the hardened product is demolished, the LIP Grouts are non-hazardous building waste. The waste from packing material are also assumed to be non-hazardous waste.

Information on biogenic carbon content

Table 64: Biogenic Carbon - LIP Rapid-setting Tile Adhesive

	Unit	Quantity
Biogenic carbon content in product	kg C	<5%
Biogenic carbon content in packaging	kg C	49%
Results per functional or declared unit. Note: 1 kg biogenic carbon is equivalent to 44/12 kg CO2.		

Additional information

Fossil free energy:
LIP Bygningsartikler A/S has used fossil free energy since 2014. Today, the energy is delivered from the wind turbine power plant at LINDØ port of Odense from Energy Fyn. The total energy consumption on the site is equivalent to 919MWh per year.

Information related to Sector EPD
This is an individual EPD.

Differences versus previous versions
This is the first version of the EPD.

*Disclaimer: This impact category deals mainly with the eventual impact of low dose ionizing radiation on human health of the nuclear fuel cycle. It does not consider effects due to possible nuclear accidents, occupational exposure nor due to radioactive waste disposal in underground facilities. Potential ionizing radiation from the soil, from radon and from some construction materials is also not measured by this indicator.

**Disclaimer: The results of this environmental impact indicator shall be used with care as the uncertainties on these results are high or as there is limited experienced with the indicator.
